Amazingly Quiet for Today's World Market

RK-3D/RK-3E

A potter's wheel of global standards, developed by Nidec-Shimpo in Japan, has just become available!

Extremely smooth operation

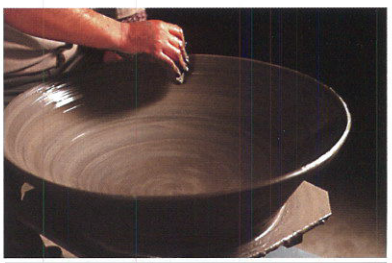
RK-3D

Free Spinning

Wheelhead turns freely in the off position that allows it to be used as a banding wheel.

Easily change direction of rotation with the FWD/REU switch

You must return the wheel to "0" RPM after a power interpretation or changing direction which avoids sudden, unexpected starts.



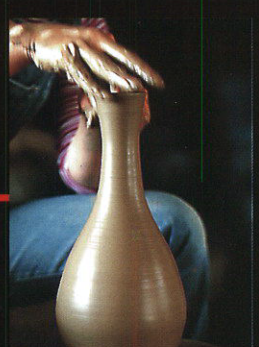
Stable power (400 W motor) Even when applying pressure it does not slip at low RPM's. It is also responsive when making large pieces.

DD motor (Direct Drive Motor)

Its excellent features are quietness, since developed as a highly efficient motor to save energy. You also do not feel any annoying noise or vibration since there are no belts, gears or drive components.

Now a DD(direct drive) motor matched with a potter's wheel.

The DD motor is vibration free with fast responses. The wheel will respond quickly and smoothly to the foot pedal or lever.



No vibration when throwing a longnecked piecs.
